

Chat with General AI

In this process, you will learn how to interact with a General AI model for obtaining answers to your questions. This involves submitting queries and receiving responses without saving interactions or engaging in dialogue modes with other models. Follow the steps below to effectively use the General AI for your informational needs.

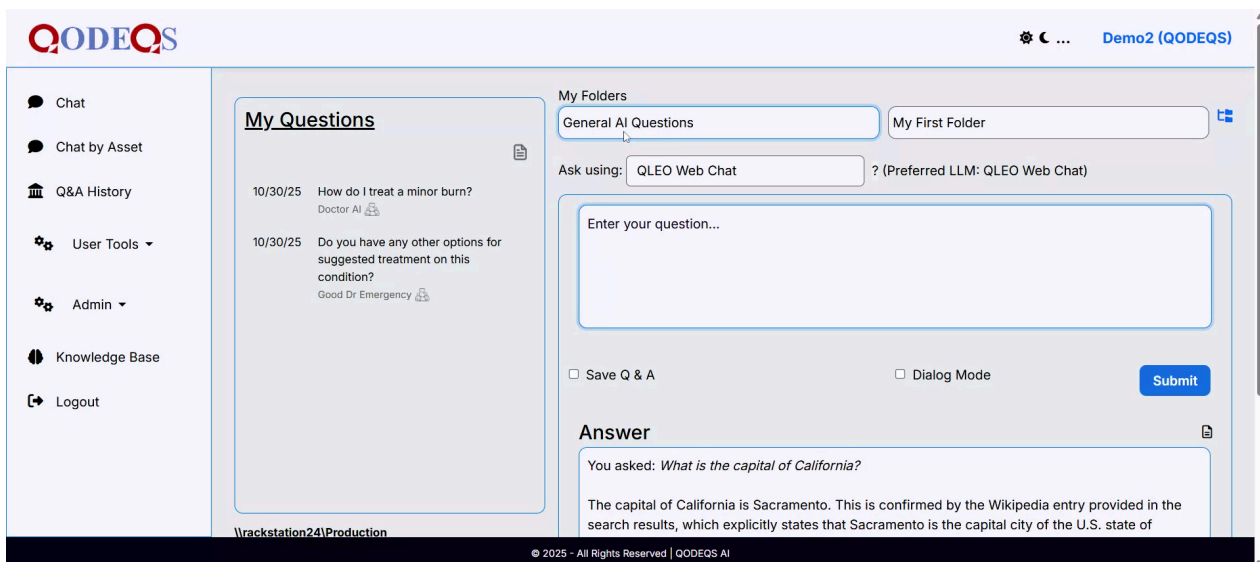

Step 1

To begin, navigate to the "General AI Questions" section. This feature is specifically designed for handling general queries that do not require saving to folders or interaction with other models.

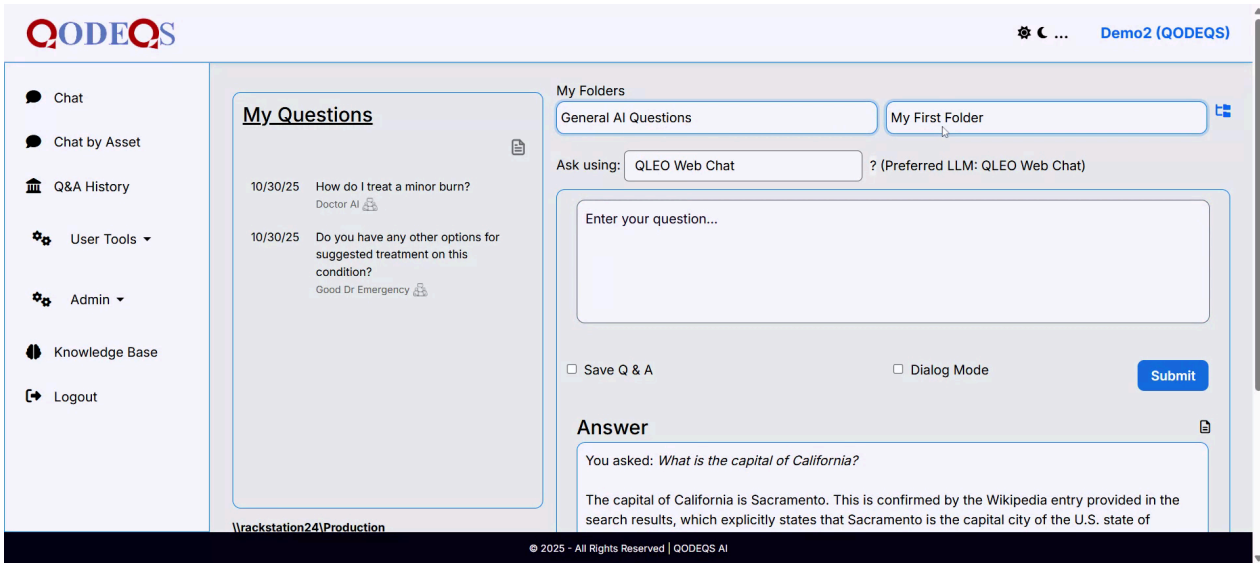

Step 2

Upon accessing the section, the system will automatically set the required defaults.

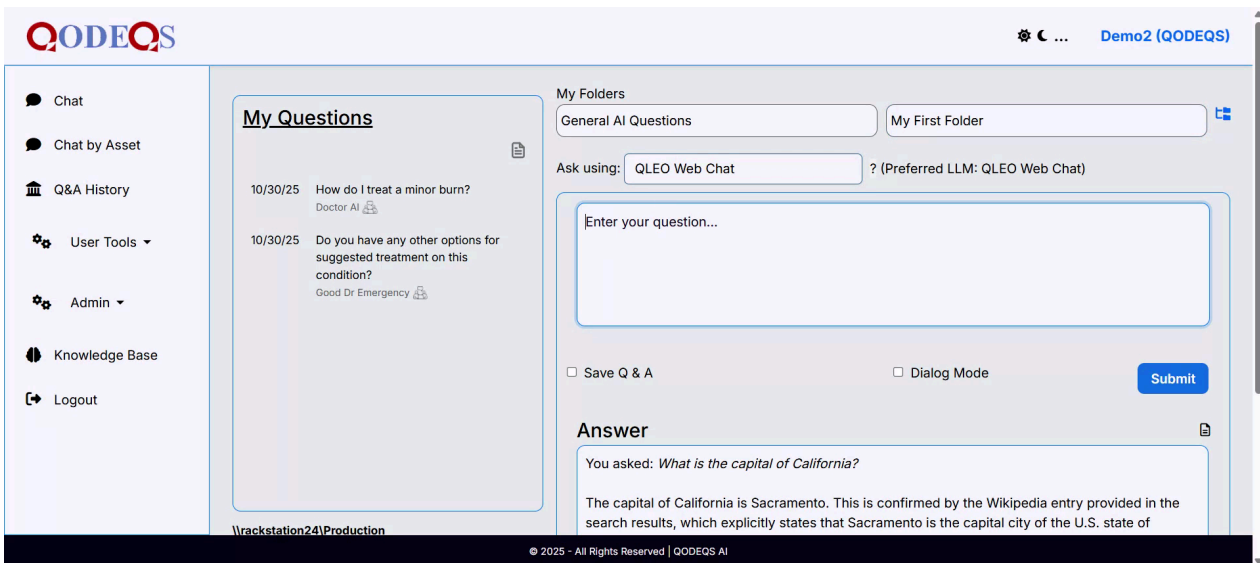

Step 3

The next point of interest is "My First Folder," which serves as a default and pre-created folder for organizational purposes. From here, proceed to the "Clio Web Chat."

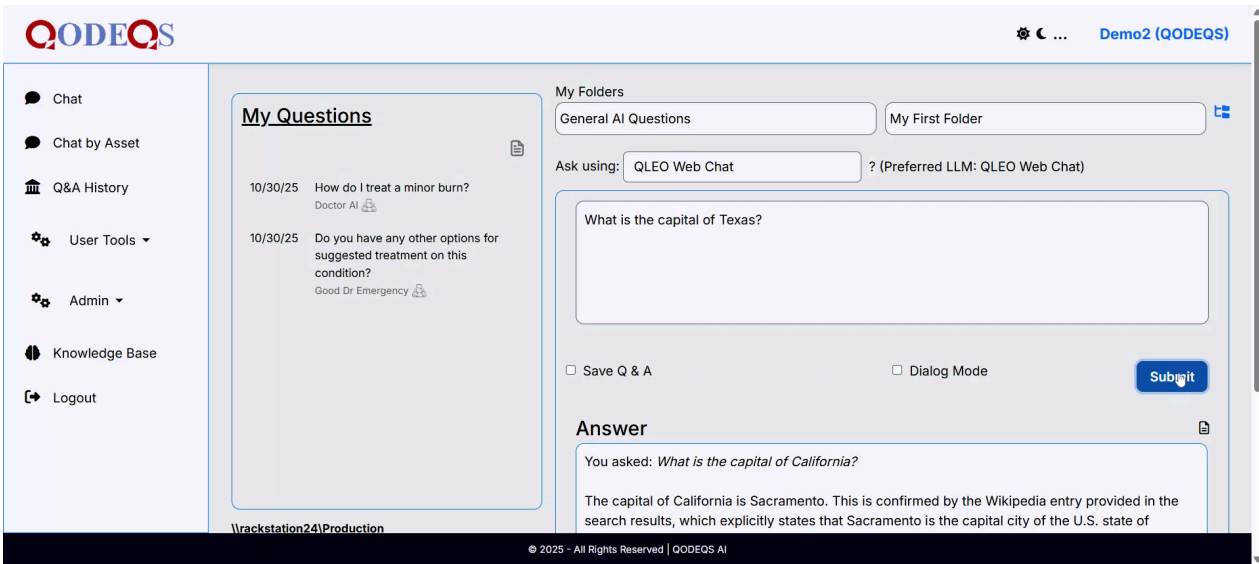

Step 4

Once in the chat interface, enter your question in the designated input box.

Step 5

For illustration, consider the question, "What is the capital of Texas?" Enter this question, ensuring not to save it or engage in dialog mode. Proceed by clicking the blue "Submit" button.

Step 6

After submission, scroll down to view the response, which, in this example, is "The capital of Texas is Austin."
